Virtual Jewellery Try-On – Testing Report

The objective of this testing was to verify whether the jewellery items are displayed correctly and aligned with the user's facial features and body parts when using the virtual try-on functionality.Testing was performed across multiple jewellery categories, including bangles, bracelets, rings, nose rings, necklaces, and earrings.

Testing Summary

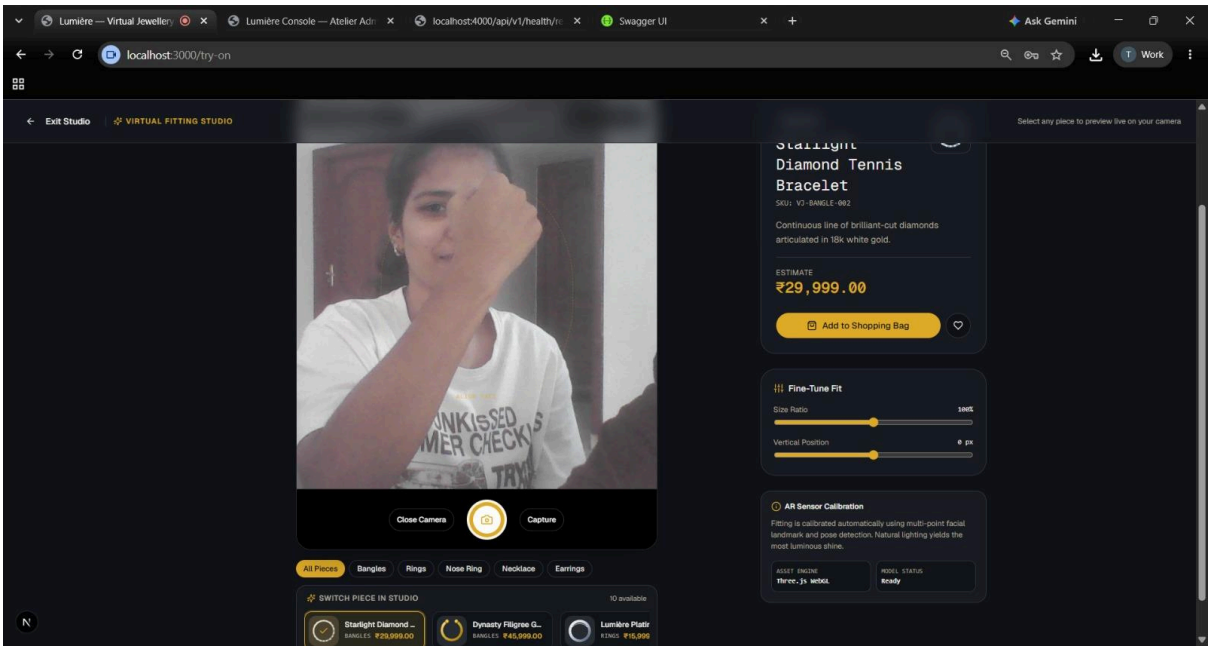

During testing, several issues were identified with jewellery visibility, facial and body detection, and jewellery positioning.

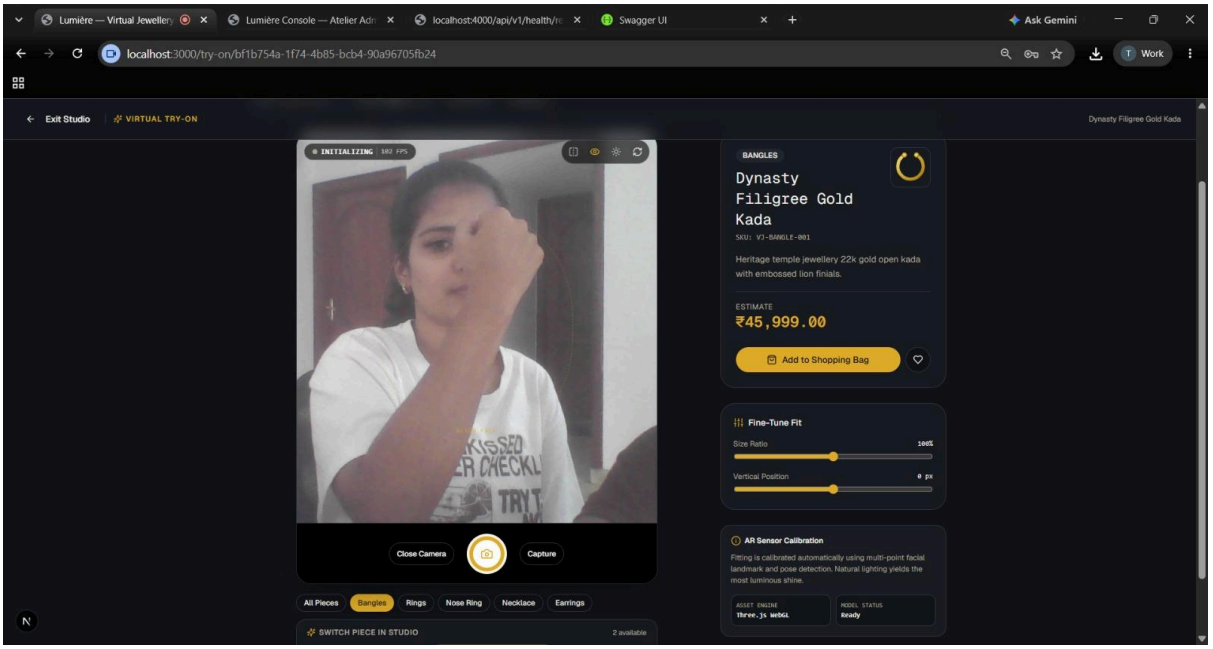

The key observations are:

- Certain jewellery items are not displayed during virtual try-on.
- Some items appear on the screen but are not correctly detected or aligned with the corresponding facial features or body parts.
- Certain necklace components are only partially visible.

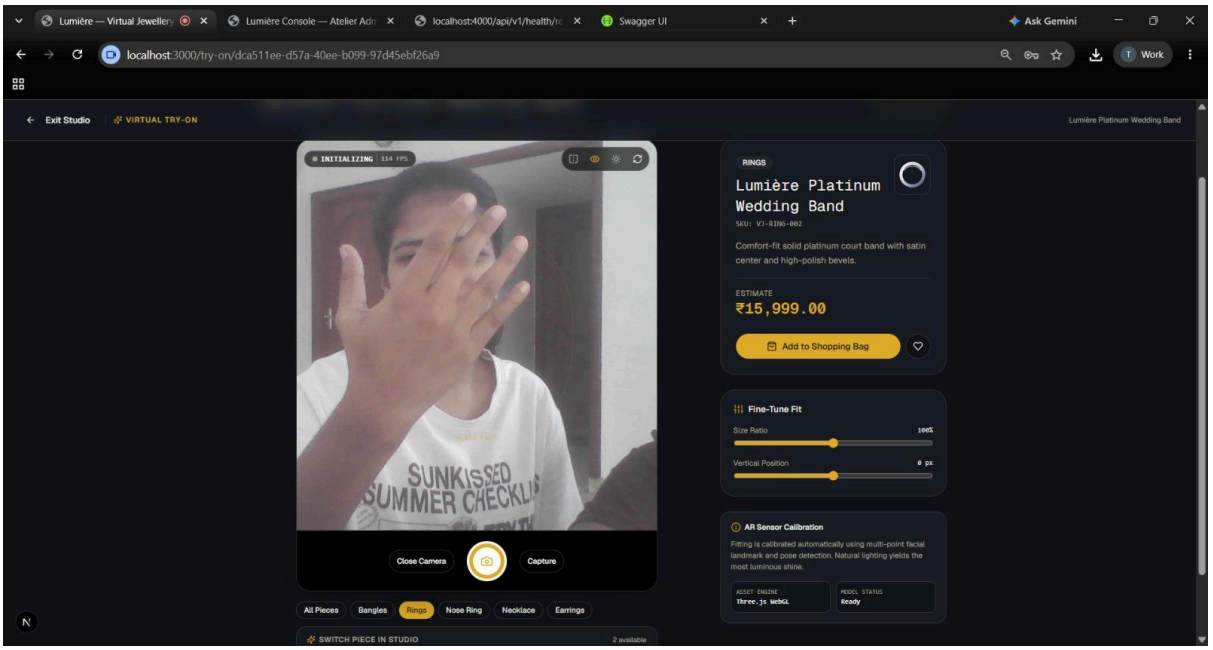

Detailed Testing Observations

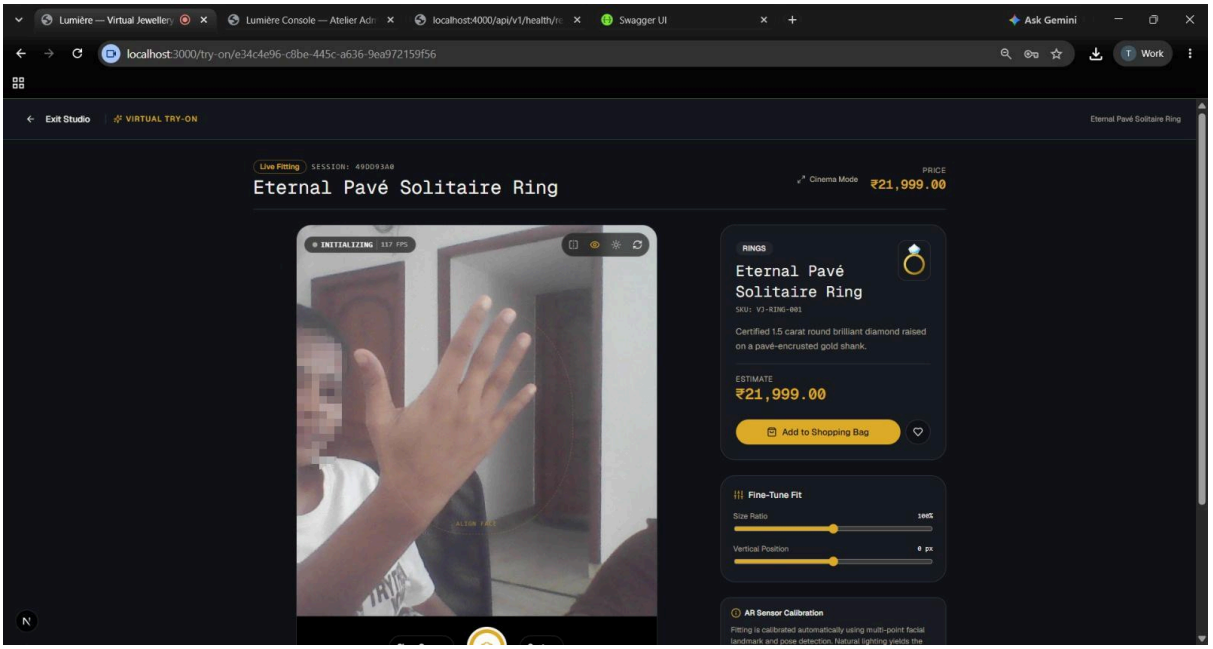

1. **Bangles :** Both bangles types are not displayed during virtual-try-on.

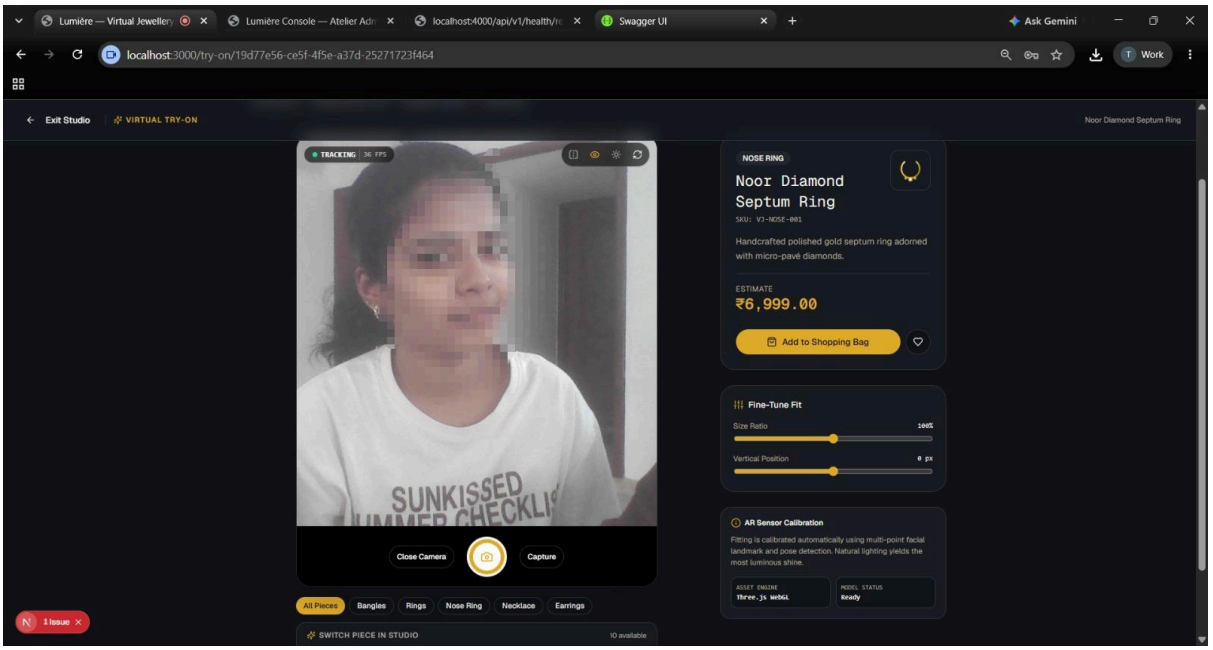

2. **Rings :** The rings are not displayed during virtual try-on.

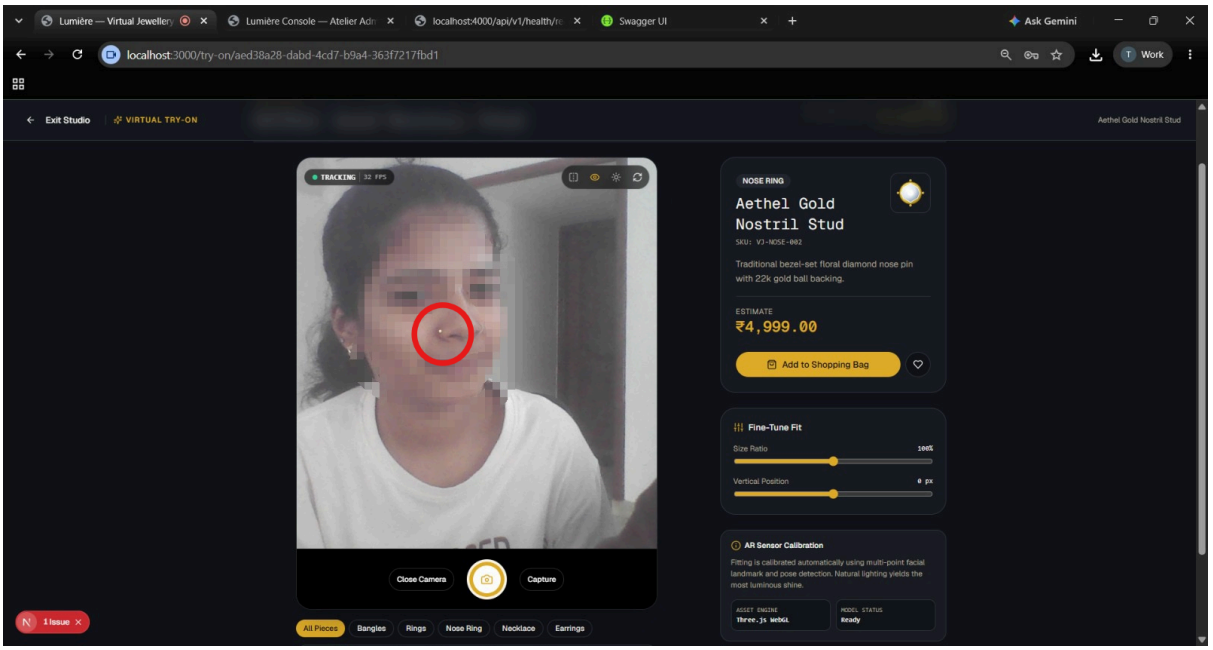

3. **Nose Rings :** One item is visible but does not correctly detect or align with the nose. The other item is not displayed.

- Nose Ring is not displayed.

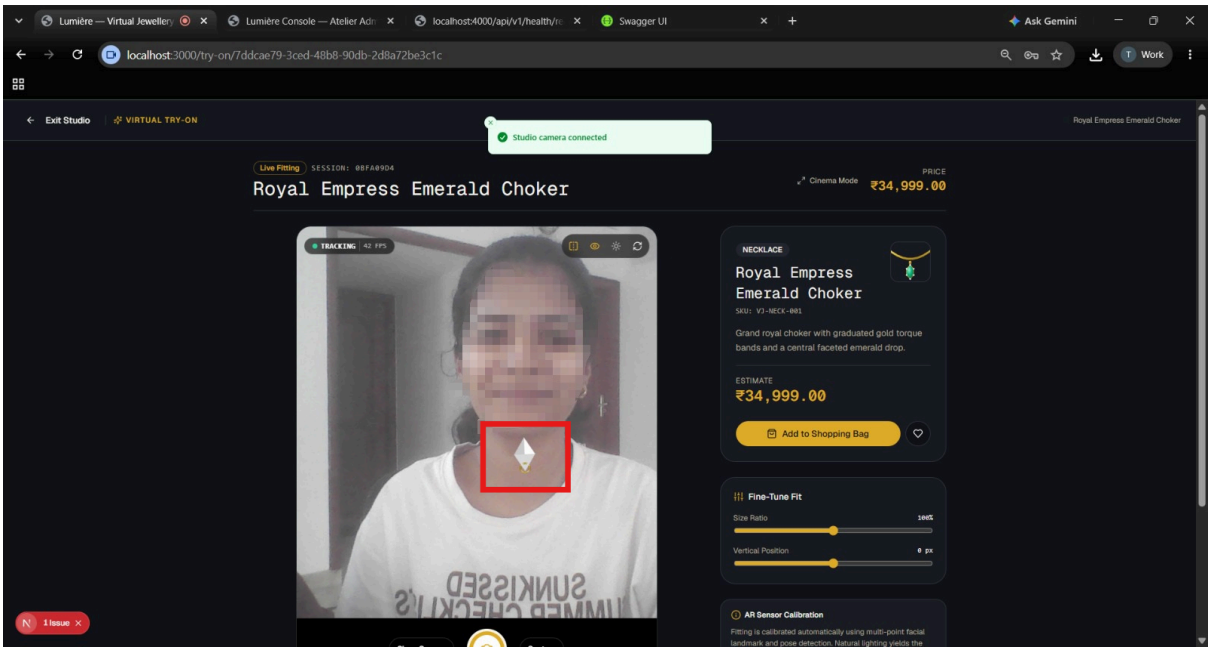

- Nose Ring is visible but does not correctly detect or align.

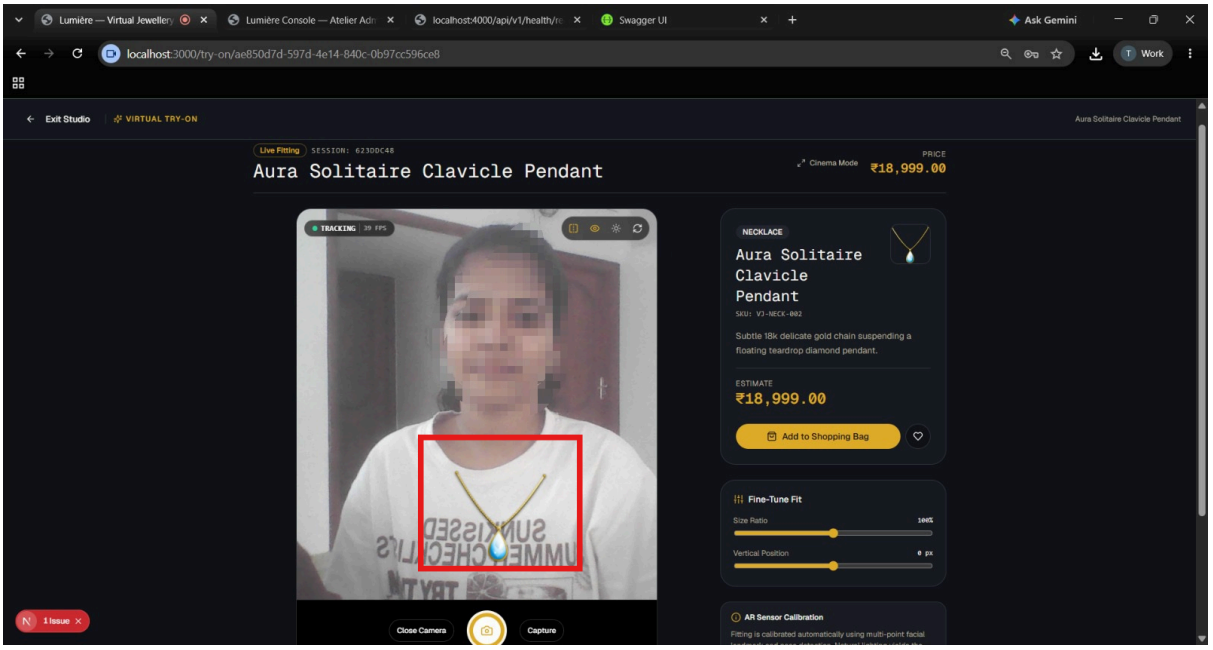

4. **Necklace :** The first necklace is visible but does not correctly detect or align with the face and neck. For the second necklace, only the pendant is visible; the chain is not displayed. The visible pendant is also not correctly aligned with the face and neck.

    - Only the pendant is visible; the chain is not displayed. The visible pendant is also not correctly aligned with the face and neck.

    - only the pendant is visible; the chain is not displayed. The visible pendant is also not correctly aligned with the face and neck.

5. **Earrings :** Both earrings are visible, but facial feature detection and jewellery alignment are inaccurate.
